

▶ Powerful Equipment Solutions for Detecting Contaminants

Achieve a "360 View" of Food Safety

Increasingly automated poultry processing practices are causing more bone chips and splinters, resulting in growing consumer complaints about food quality and safety.

You can stay out in front by harnessing X-ray technology in many parts of your processing operation. This includes during incoming product inspection, after debone lines, after grinding or mixing, post injecting/tumbling, and in packaging with bags, trays or cases.

- X-ray detection delivers more consistent results with fresh or frozen products ... in wet or dry environments.
- It detects smaller fragments and more contaminants: bone, glass, metal, ceramic and dense plastic.
- X-ray systems are ideal for final package inspection ... and they offer traceability to meet HACCP requirements easier and better.

Anritsu X-ray Inspection Systems

As the poultry industry's proven performers, nearly 10,000 X-ray detection units from Anritsu Invisiv have been installed worldwide. They're second to none when it comes to automated detection of bone material, metal, wire, glass, stone and rubber. They perform product weight calculations via "virtual weighing" technology and analyze for missing items and misshaped products.

The result? Better quality control and better-quality finished products with less labor.

Dual X: Dual Energy X-ray Inspection Systems

The Dual X delivers greater sensitivity to bone fragments by analyzing two different X-ray energy signals ... resulting in a higher detection rate of low-density items. It's

perfect for meeting the quality standards in the poultry industry.

"360 Service," Too

You can rely on Gainco to provide systems and support before, during and after your Anritsu installation:

- Systems consultation and recommendations
- Conveying and product handling equipment
- Reject systems
- Analysis and reporting capabilities
- Complete parts and service support
- Registrations and regulatory program support

To learn more, consult your Gainco technical rep or visit gainco.com/anritsu.

Metal Detection Equipment

We also offer **Fortress Phantom**, the most popular metal detection systems in the poultry industry.

They incorporate

the latest digital signal processing (DSP) technology to detect ferrous and non-ferrous metals (including stainless steel).

A hallmark of these "intelligent" metal detectors is their user simplicity. They're engineered for punishing everyday use, too. For more details, visit gainco.com/fortress.

The Right Answers for Meat Yields, Productivity and Profits

In meat and poultry processing, what goes out the back door isn't just pounds. It's profits: Profits from yields that are being measured in ever-smaller increments.

At Gainco, we've been serving the industry's leading meat and poultry processors since 1984. We're committed to tackling hard-to-solve processing issues that affect bottom-line performance.

Diverse Systems and Solutions

Our broad range of offerings encompasses over 25 equipment categories and more than 100 models, which also form the basis for unique system solutions.

- AccuFill® baggers and bulkers
- AccuSizer™ product classifier systems
- DuraWeigh® bench scales, floor scales, tank-and-hopper weigh bar kits
- DuraWeigh® in-motion checkweigher systems
- Gainco® Ininiti® weight indicators
- WeighMaster™ overhead sizing and distribution systems

- YieldPlus® debone and trimming yield management systems
- YieldScan™ rapid frame analyzers

We also work closely with other key select manufacturers as an authorized OEM distributor, including:

- Anritsu Inifivis X-ray detection systems
- Cardinal weight indicators
- Fortress Technology metal detection systems
- GSE weight indicators
- Mayekawa automated deboning systems
- Weltech International live bird weighing systems

We're Close ... We're Committed

There's nothing like being close to the action. Our U.S.-based operations give us an edge over foreign competitors and make it possible to deliver the highly collaborative support you want in order to solve your processing challenges most effectively and efficiently.

BLUE RIBBON
SERVICE

Quality Customer Care – When and Where You Need It

- In-house factory-trained service technicians by phone or Internet
- Certified field service technicians available nationwide
- Comprehensive technical support and troubleshooting capabilities
- Customizable service plans and preventative maintenance agreements
- Genuine OEM parts and aftermarket components availability
- Supply chain management services, including individualized parts programs for a single plant or an entire company
- Precision scale calibration services
- Weight indicator and circuit board repair services conducted by our own fully-licensed technicians
- Operating training conducted by our own certified customer service technicians

For additional information on equipment specs, contact your Gainco technical sales representative or call toll-free **877-869-7410**.
